Callaway RAZR X Tour Irons

\$635.00

Tighter Shots, Shorter Putts, Lower Scores through RAZR Technology. Get the power and forgiveness of a wide sole iron with the precision of a thin sole iron. Most irons today are designed to maximize one specific performance benefit – Distance, Forgiveness or Feel – while sacrificing all other critical areas needed to hit more greens. To consistently hit it close and shoot lower scores, golfers need to be able to make shots from all areas of the golf course. That’s why RAZR Technology is such a breakthrough. This technology will lead the industry into the next generation of iron design by delivering the distance and forgiveness of a wide sole iron while retaining the playability and turf interaction advantages of a thin sole iron.

- **RAZR Technology** - Shifts the center of gravity 12% lower and 15% deeper and allows for more shot-making by providing the power and forgiveness of a wide sole iron while retaining the precision and playability of a thin sole iron.
- **VFT® Power System** - Fully integrated clubface/undercut cavity system that enables our engineers to precisely position the CG and engineer the face of each individual iron to maximize ball speed.
- **Customized Set Options** - Golfers who struggle hitting long irons can increase distance and forgiveness by substituting RAZR X Hybrids into the set where your confidence and consistency start to drop off.
